

A Snail's Pace Drawing

- Snails are invertebrates, which means they do not have a backbone
- These animals move around on a single muscly "foot"
- They carry their home (shell) on their backs
- They retreat inside their shells at the first sign of danger
- Snails are found on land and in the sea
- Snails use their multi-purpose mucus to close the door on winter. Snails make a dried lid of slime over the shell mouth, which seals in the snail for several months then covers itself with soil and leaves to keep extra warm

Have a go yourself, try your absolute best. Remember to take your time, keep looking at the different techniques you can use to create shade and tone with your pencils.
